40 In general, the work consists of: Update and replace existing water softeners at the heating plant with new softeners,
41 carbon filters and RO systems capable of the flow requirements required for regeneration and emergency backup.
42 Work will also include updates to the existing brine tank. Existing systems do not utilize RO quality water to the
43 boilers. RO quality water will help reduce energy consumption and improve water chemistry to the boilers.
44 Improving chemical and salt delivery to the process will limit operation handling and improve safety.
45

46 Construction bidding documents (drawings, specifications and addenda) may be obtained only as downloadable
47 electronic files (in PDF format) from the Division of Facilities Development website. Construction bidding
48 documents may also be available at various Builders' Exchanges. Additional project bidding information, including
49 plan holders lists are available on the Division of Facilities Development public website:
